HEMANTH K J

Bangalore, Karnataka | +91 6366304730 | hemanthdevanga48@gmail.com | LinkedIn | GitHub

SUMMARY

Passionate full-stack developer with hands-on experience building scalable, distributed systems using Java, Spring Boot, and React.js. Skilled in designing RESTful APIs, implementing secure JWT authentication, and leveraging Redis caching and Apache Kafka messaging for high-performance applications. Strong foundation in Data Structures, Algorithms, and Object-Oriented Programming, with a drive to solve complex engineering challenges in cloud-native environments using Docker and Google Cloud Platform.

EDUCATION

B.E. Computer Science, Garden City University **2027**
CGPA: 8.81 / 10

XII, St. Francis Composite PU College **2023**
Percentage: 88.83%

X, Matha's English High School **2021**
Percentage: 82.08%

CERTIFICATIONS

Google UX Design Professional Certificate, Coursera 2026-07-26

Agentic AI Engineering, Coursera 2026-07-23

TECHNICAL SKILLS

Languages: Java, JavaScript, HTML, CSS
Frameworks & Libraries: Spring Boot, Spring Security, Spring Data JPA, Node.js, Express.js, React.js
Databases & Caching: PostgreSQL, MongoDB, MySQL, Redis
Cloud & DevOps: Docker, Google Cloud Platform, Nginx, Git, GitHub
APIs & Messaging: REST APIs, JWT, Apache Kafka
Core CS: Object-Oriented Programming, Data Structures and Algorithms, DBMS, Problem Solving

PROJECTS

Distributed URL Shortener

- Architected a distributed URL shortening service using Spring Boot and RESTful APIs, designing a multi-tier architecture with PostgreSQL for persistence, Redis for 5·10ms redirect caching, and Apache Kafka to decouple asynchronous click analytics from the core redirection pipeline — all containerized with Docker and deployed on Google Cloud.
- Designed a secure authentication and caching layer using JWT and Spring Security alongside a Redis-backed caching strategy, reducing redirect latency to ~5·10ms and reliably handling 10+ concurrent requests across 10+ active URL mappings.

Employee Leave Management System

· Engineered a secure role-based access control (RBAC) system using JWT, enabling granular permission management for Admin, Manager, and Employee roles across the leave management lifecycle.

- Built RESTful APIs with CRUD operations implementing leave application and multi-step approval workflows, document upload handling, employee profile management, and real-time in-app notifications — deployed as the organization's central HR tool
